### **DETAILED ACTION**

Claims 60-80 are pending.

#### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, Claims 60-80, drawn to a cellular, reporter method for identifying an inhibitor of a GTPase.

For Invention I above, restriction to one of the following is also required under 35 USC 121.

For Invention I, elect one of:

- (A) H-Ras
- (B) N-Ras
- (C) K-Ras4A
- (D) K-Ras4B
- (E) Rho
- (F) Ran
- (G) Arf/Sar1
- (H) Rab/YPT1

For Invention I, also elect one of:

- (I) Wild-type GTPase
- (J) Mutant hyperactive GTPase
- (K) Mutant constitutively active GTPase
- (L) Oncogenic GTPase

For Invention I, also elect one of:

- (M) Low through-put
- (N) High through-put

The inventions listed as Groups I(A)-(N) do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical feature for the following reasons: The technical feature linking Groups I(A)-(N) appears to be that they all relate to a cellular, reporter method for identifying an inhibitor of a GTPase. However, cellular, reporter methods for identifying an inhibitor of a GTPase were known in the art. For example, Mochizuki et al, 2001 (specification) teach a cellular, reporter method for identifying an inhibitor of a H-Ras GTPase (pg 1067, parag 3), which anticipates Claim 1. Therefore Groups I(A)-(N) share no special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art. Furthermore, the methods of Groups I(A)-(N) do not use the same reagents or produce the same results.

Searching more than one of Groups I(A)-(N) would represent a burden on the Office for the following reasons. A search for any one of the methods of Groups I(A)-(N) would not encompass a search for any other said methods because the methods do not share a special technical feature of steps and products used, or results produced. Thus, the search for more than one of Groups I(A)-(N) would be a burden on the Office.

The searches for any one invention are not required for and are not coextensive with the searches for any other invention, thereby creating an undue burden of search and examination. The results from a search of each of these inventions have different considerations with respect to the prior art. Burden lies not only in the search of U.S. patents, but also in the search for literature and foreign patents and in examination of the claim language and specification for compliance with the statutes concerning new matter, distinctness, written description and enablement.

These inventions are distinct for the reasons given above and have acquired a separate status in the art due to their recognized divergent subject matter, as shown by their different classification. Furthermore, as explained above, searching more than one invention would be a burden on the Office. Therefore, restriction for examination purposes, as indicated, is proper. If Applicants should traverse the restriction based on an argument that inventions are not distinct, they should provide evidence as to why the restricted inventions are obvious over their elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

To insure that each document is properly filed in the electronic file wrapper, it is requested that each of amendments to the specification, amendments to the claims, Applicants' remarks, requests for extension of time, and any other distinct papers be submitted on separate pages.

It is also requested that Applicants identify support, within the original application, for any amendments to the claims and specification.
